Hospital Quality-Based Program: Potentially Preventable Complications (PPC) Hospital Level Report

About this report

Senate Bill 7, 82nd Legislature, First Called Session, 2011, and S.B. 7, 83rd Legislature, Regular Session, 2013, requires HHSC to implement a reporting process and reimbursement reductions to hospitals based on performance in potentially preventable readmissions (PPRs) and potentially preventable complications (PPCs). In fee-for-service (FFS) Medicaid, actual rates of these potentially preventable events are compared to expected rates and a final reimbursement adjustment is determined and applied to all claims paid by HHSC.

A hospital with an actual-to-expected PPC ratio equal to or greater than 1.10 and equal to or less than 1.25 is subject to a reimbursement adjustment of -2%. An actual-to-expected PPC ratio greater than 1.25 is subject to a reimbursement adjustment of -2.5%. Note: The actual-to-expected ratio is rounded to two decimal places. Additionally, certain hospitals designated as safety-net hospitals may be eligible for incentives based on low actual-to-expected ratios. The criteria for incentives is on the HHSC Potentially Preventable Events webpage listed below.

This report is designed to help hospitals target their improvement efforts. HHSC will provide underlying detailed data for this report through an e-mail request (please include full name, email, phone number, NPI, TPI, and hospital name) to MCD_PPR_PPC@hhsc.state.tx.us
